

A LOCAL-FIRST DESIGN ENGINE

Design by asking.

An open-source design engine you drive from the model you already use. No platform fee stacked on top. No lock-in. Your files stay yours.

Sharing an idea shouldn't cost a subscription.

The tools for turning a thought into a visual have quietly become a stack of recurring bills.

01

—
Pay for the platform

A subscription just to open the canvas and make one graphic.

02

—
Then pay for the model

AI credits on top — metered, capped, and gone by month's end.

03

—
Locked to one vendor

Their model, their cloud, their export. Your work, on their terms.

04

—
The setup tax

Accounts, API keys, a whole new UI to learn before you begin.

An open engine. Your own model.

Folio is free and open-source. You drive it from the model you already pay for — nothing new to subscribe to.

Open & local

The engine is open-source and runs on your machine. Every design is a plain YAML file you own and can version.

Bring your own model

Drive it over MCP from Claude — or a free local model. No model markup, no second bill, no vendor lock.

Just ask

Describe what you want in plain words. The model designs it; the engine makes sure it renders correctly.

From a sentence to a spec.

Four steps, no canvas-wrangling. You bring the intent; the engine handles the geometry.

The model designs. The engine assists.

Most tools template you toward the average. Folio is built to do the opposite.

No templates

Folio ships zero preset layouts. The model decides the look every time, so two prompts never collapse into the same design.

Spatial math, handled

Grids, ratios, fit, overflow, alignment — the engine guarantees the geometry, so the model spends its budget on taste.

An anti-slop filter

A built-in linter flags the generic gradient-navy-centered defaults before they ship. Your output won't look AI-made.

One engine, many surfaces.

Posters are just the start. The same engine makes everything you'd open a design tool for.

Posters

Single-page graphics for any topic, auto-sized to fit.

Carousels

Multi-page social decks in one cohesive system.

Slide decks

Presentations like this one — exported straight to PPTX.

Diagrams

Flowcharts, mind-maps and technical figures.

Data reports

Interactive dashboards with live charts and filters.

Batch runs

One template, many variations, generated at once.

Read the fine print.

The same four questions, asked of every tool.

	No platform fee	Any model	Local files	Open-source
Folio	✓	✓	✓	✓
Canva	×	×	×	×
Figma MCP	×	~	×	×
Google Stitch	~	×	×	×
✓ yes	~ partial	×	×	×

Built like a product, not a demo.

A real, tested engine — not a weekend prototype.

21

MCP tools

3,000+

unit tests

<1s

cold start

100+

design styles

407

TypeScript source files — split, tested,
< 700 lines each

5

export formats — PNG, PDF, PPTX, SVG and HTML

0

build steps — it runs straight from source

For people with something to say.

Not built for design teams — built for everyone who just needs to share the idea.

Founders & makers

Ship a launch graphic, a pitch slide or a changelog post — without a designer on payroll.

Engineers & writers

Turn docs, diagrams and data into something people actually read.

Creators & educators

Carousels, explainers and decks — on a schedule, in your own voice.

Lean teams

One engine instead of five subscriptions nobody remembers to cancel.

GET STARTED

Stop renting your design tools.

Folio is open-source. Bring the model you already pay for and design in plain language — nothing new to subscribe to.

github.com/azzindani/Folio

Design by asking.

- ✓ Open-source engine
- ✓ Driven by your own model
- ✓ Files that stay yours
