

You're ignoring these office superpowers

BEFORE

AFTER

01

Excel Macro (VBA)

EXPECTATION Manual data entry is just part of the job.

REALITY **One recorded macro replaces hours of it — every week, without asking.**

“I used to dread month-end reports. Then I recorded my first macro.”

02

SharePoint Document Library

EXPECTATION A shared drive is good enough.

REALITY **Version history means nobody ever emails “final_v3_REAL.docx” again.**

SHARED DRIVE

proposal_final.docx
proposal_final_v2.docx
proposal_FINAL_real.docx
proposal_use_this_one.docx

DOCUMENT LIBRARY

proposal.docx

v3 · today · A. Azzindani
v2 · 12 Mar
v1 · 28 Feb

“Finding last year's proposal in ten seconds — that was the moment it clicked.”

03

SharePoint List

EXPECTATION Track the project in a spreadsheet.

REALITY **A list gives you structure and live collaboration — no merge conflicts.**

TASK	OWNER	DUE
Vendor data cleanup	Rina	TODAY
Approval workflow test	Afza	24 Jul
Archive Q2 documents	Dimas	02 Aug

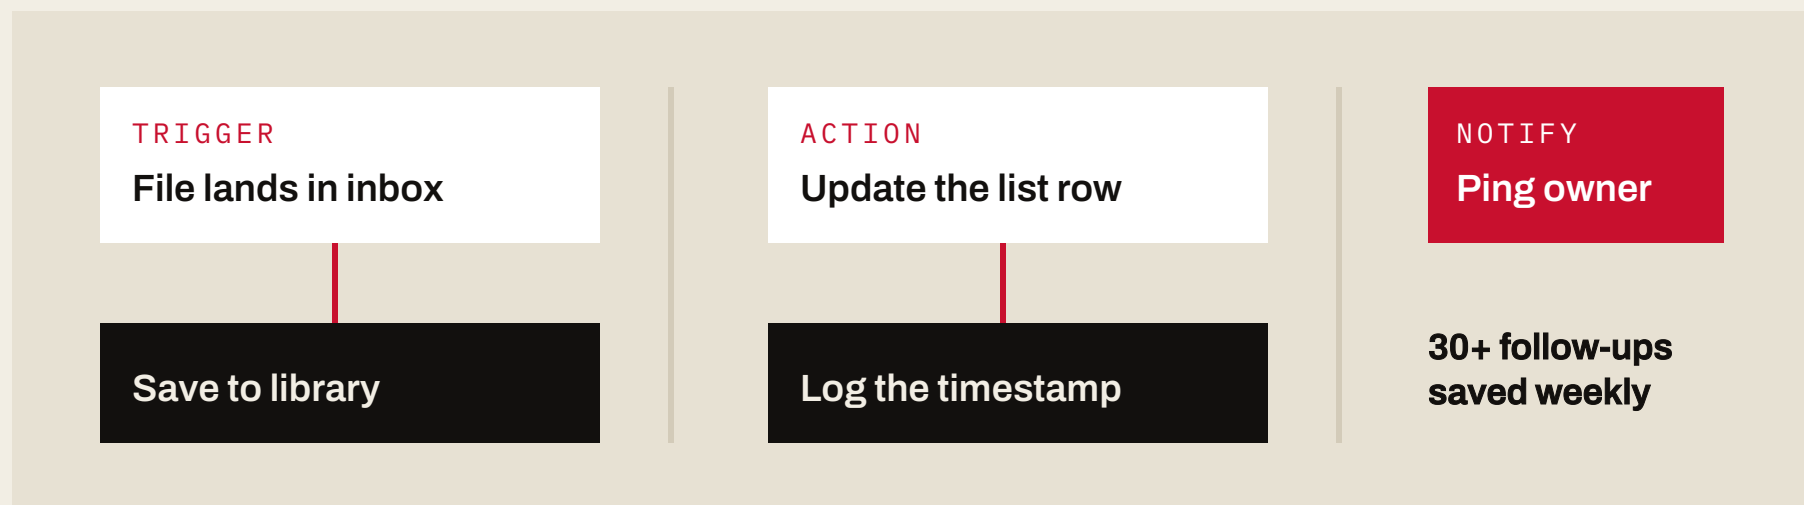

The trade-off is real: a list gives you structure, Excel gives you freedom. Pick the one that matches how many people touch it.

04

Power Automate

EXPECTATION Chasing people is part of the process.

REALITY **A flow files it, updates it and nudges the right person — while you sleep.**

“The flow doesn't get tired, and it never forgets to send the reminder.”

05

Power Apps

EXPECTATION Building an app needs a dev team.

REALITY **Drag, drop, add logic. The form your team actually uses, built in an afternoon.**

The screenshot shows a mobile app interface for 'Site Inspection'. It has a black header with the title 'Site Inspection' in white. Below the header, there are two sections. The first section is labeled 'LOCATION' and contains a single text input field with the value 'Warehouse B'. The second section is labeled 'STATUS' and contains two buttons: a red button labeled 'PASS' and a light gray button labeled 'FLAG'.

WHAT IT REPLACED

A paper form
photographed and emailed in

A spreadsheet
retyped by someone on Monday

Two follow-up calls

No dev team? The constraint was never the code — it was who was allowed to build.

THE TAKEAWAY

Hidden tools are hidden hours.

None of these needed budget approval. They were already sitting inside the licence you pay for.

Excel Macro

hours of retyping

Document Library

the version hunt

SharePoint List

the status meeting

Power Automate

the follow-up

Power Apps

the paper form

Which one frees your next ten hours?
